The importance of Hodge cycles lies primarily in the Hodge conjecture, to the effect that Hodge cycles should always be algebraic cycles, for V a complete algebraic variety. This is an unsolved problem, as of March 2020 [update] ; it is known that being a Hodge cycle is a necessary condition to be an algebraic cycle that is rational, and numerous particular cases of the conjecture are known.

In mathematics, Hodge theory, named after W. V. D. Hodge, is a method for studying the cohomology groups of a smooth manifold M using partial differential equations. The key observation is that, given a Riemannian metric on M , every cohomology class has a canonical representative, a differential form which vanishes under the Laplacian operator of the metric. Such forms are called harmonic. The theory was developed by Hodge in the 1930s to study algebraic geometry, and it built on ...

1.2. Algebraic cycles. Let $X \in \mathcal{V}_d(k)$; let $0 \leq i \leq d$ and $q = d - i$. Let $Z^q(X) = Z^i(X)$ be the group of algebraic cycles of dimension q (i.e. codimension i) on X , i.e. the free abelian group generated by the k irreducible subvarieties W of dimension q , but W not necessarily smooth. Therefore such an algebraic cycle $Z \in Z^q(X) = Z^i(X)$ can be written ...

HODGE-THEORETIC INVARIANTS FOR ALGEBRAIC CYCLES MARK GREEN AND PHILLIP GRIFFITHS Abstract. In this paper we use Hodge theory to define a filtration on the Chow groups of a smooth, projective algebraic variety. Assuming the generalized Hodge conjecture and a conjecture of Bloch-Beilinson, we show that

(Hodge proved $C(X)$ holds for a surface using Hodge theory and noted it would hold in general if the Hodge conjecture is proved ($k = \mathbb{C}$.) As a consequence, the zeta function of a smooth complete
