Solution Of Second Order Differential

We can solve a second order differential equation of the type: $d^2 y/dx^2 + P(x) dy/dx + Q(x)y = f(x)$ where $P(x)$, $Q(x)$ and $f(x)$ are functions of x , by using: Variation of

**Order Differential
Equation ...**

A set of two linearly independent particular solutions of a linear homogeneous second order differential equation forms its fundamental system of solutions. If $y_1(x), y_2(x)$ is a fundamental system of solutions, then the general solution of the second order equation is represented as $y(x) = C_1y_1(x) + C_2y_2(x)$,
